

Code to cloud in minutes

The fast, simple, and secure way to deliver applications

shuttleops.io

One Platform to Rapidly

Build, Deploy and Manage Applications

ShuttleOps automates application delivery across cloud environments, so businesses can get their applications and associated fixes and updates to customers quickly.

ShuttleOps supports continuous integration (CI) and continuous delivery (CD) in one platform, enabling DevOps teams to rapidly build, deploy and manage applications. The intuitive visual pipeline editor offers seamless integration of the DevOps toolchain - so companies can get their code to cloud in minutes.

What You Can Do...

- Build and deploy applications packaged with Chef Habitat from your GitHub, GitLab, and BitBucket accounts
- Deploy popular open source DevOps tools with our prebuilt templates
- Deploy applications from Chef's Habitat Depot of +700 core plans for tools like Jenkins, Vault, Artifactory, Nexus, WordPress and more

What You Get

- Faster, higher-quality software delivery
- Consistent, predictable releases
- Effortless onboarding, rapid adoption
- Increased productivity and collaboration
- Greater transparency and visibility
- Secure software delivery

ShuttleOps Features

Eliminate release delays, costly rollbacks, and unplanned work

ShuttleOps automates your application delivery processes so you can eliminate the latency, bottlenecks, and failures tied to manual release tasks. The visual editor simplifies tools integration, pipeline creation and infrastructure provisioning - so development, infrastructure, security and operations teams have a single platform to deliver applications to the cloud.

Workflow Pipelines

Combines the flexibility of a business workflow with the capabilities of a technical pipeline

Build & Release Orchestration

Create build and deploy workflow pipelines in one product

Notification & Approvals

Setup notification or approval gates at any step in the process

DevOps Collaboration

Collaborate across development, infrastructure, security and operations teams

Analytics & Reporting

Full transparency into logs, pipeline status, velocity and environment health

Infrastructure Provisioning

Dynamically provision, and update configurations and policies based on environment and demand

Secrets Management

Securely store secrets, passwords, certificates, keys and tokens in an enterprise grade vault

SaaS Not Services

Rely on automation technology instead of unmaintainable scripts and implementation services
